Preface

VORWORT

Hostatint™ A 100 RAL shades

FORMULATIONS BASED ON HOSTATINT A 100 PIGMENT PREPARATIONS

Hostatint A 100 pastes are solvent-containing pigment preparations based on a carrier resin (aldehyde resin) that was developed specially for industrial paint applications.

Only durable organic and inorganic pigments were selected for high quality paint applications. The pastes are produced within narrow tolerances of shade and color strength allowing highly consistent paint production path with manual and automatic dispensers. The solvents and additives are carefully selected, therefore a hazardous labelling or special storage requirements associated with their flammability is not necessary. Hostatint A 100 shows good compatibility and can thus be added in the usual amount to virtually all types of solvent-based industrial paint systems.

The formulations are based on RAL 841-GL (high gloss) color register and shades were adjusted as close as possible (delta E at D65 standard light < 1.0). Hostatint A 100 colorants were blended into an alkyd melamine baking system at complete opacity, note that these colorants can be loaded up to 25-30 % without any negative effect on gloss and flow. Loading need to be optimized for each system as it may differ depending on the resin type. Generally for every formulation, the optimum loading is important to achieve the best opacity and cost parameters.

Depending on the specific application conditions, resin and additives the amount of individual colorants can vary. Generally all present formulations can be transferred to any other solvent based binder system (e. g. acrylate, long-oil-alkyd, epoxy, polyester, polyurethane) as long as compatibility is given.

As a guideline, we recommend the following Hostatint A 100 colorant loadings for different shade areas:

ca. 20-25 %	ca. 10-15 %	ca. 5-10 %
Yellow, Orange	Red	Pink, Violet, Blue, Green, Gray, Brown, White, Black

Major features

- Wide selection of pigments
- High pigment loading and good rheological properties
- Good compatibility in all major solvent-based industrial paint systems
- Suitable for automatic and manual dispensers
- No hazardous labeling
- No special storage requirements associated with their flammability

IMPORTANT NOTES

- Pre-testing in the customer specific paint system is absolutely necessary especially with regard to compatibility and maximum addition rates
- The colour index data in this brochure relate to the basic powder pigment
- The data given in this brochure may vary slightly because these pigment preparations are standardized in respect to tinctorial strength, hue and chroma

Specifications

Relative tinting strength:	95 - 105 %	(gravimetric + volumetric)
Hue:	dH = ± 0.50	(CIELAB units)
Chroma:	dC = ± 0.80	(CIELAB units)
Total color difference:	dE = 0 - 1.0	(CIELAB units)

Hostatint™ A 100 RAL-Farbtöne

FORMULIERUNGEN AUF BASIS VON HOSTATINT A 100 PIGMENT-PRÄPARATIONEN

Hostatint A 100 Pasten sind lösemittelhaltige Pigment-Präparationen auf Basis eines Trägerharzes (Aldehydharz), die speziell für Industrielack-Anwendungen entwickelt wurden.

Die Pigmentauswahl basiert ausschließlich auf hochwertigen und beständigen organischen sowie anorganischen Pigmenten für qualitativ hochwertige Lackierungen. Die Pasten werden in sehr engen Toleranzen im Hinblick auf Farbton und Farbstärke produziert, so dass eine reproduzierbare Lackproduktion sowohl mit automatischen als auch mit manuellen Dosiermaschinen möglich ist. Die verwendeten Lösemittel und Additive wurden sorgfältig ausgewählt, so dass eine Kennzeichnungspflicht oder spezielle Lagervorschriften, wie bei anderen gebräuchlichen Präparationen hinsichtlich deren Entflammbarkeit entfallen. Hostatint A 100 zeigt eine gute Verträglichkeit und kann somit in den üblichen Zugabemengen in allen gebräuchlichen Lösemittel basierenden Industrielacksystemen verwendet werden.

Zur Nachstellung der Farbtöne dient das Farbgeregister RAL 841-GL (hochglänzend), welche so naheliegend wie möglich eingestellt wurden (delta E bei D65 Normlicht < 1.0). Die Farbtöne wurden in einem Alkyd-Melaminharz-Einbrennlack deckend eingestellt und ausgearbeitet. Die maximale Zugabemenge der Hostatint A 100 Pasten liegt bei ca. 25-30%, ohne dass ein negativer Einfluß auf den Glanz des Lackes im Prüfsystem (Alkyd-Melaminharz-Einbrennlack) zu beobachten war. Jedoch ist dieses in Abhängigkeit vom jeweiligen Bindemittelsystem individuell zu prüfen. Generell muß für jeden Farbton separat die optimale Zugabemenge ermittelt werden, um das bestmögliche Verhältnis zwischen Deckvermögen und Kosten zu erreichen.

Die angegebenen Mengenanteile der einzelnen Pasten können unter den konkreten Anwendungsbedingungen variieren, vor allem bedingt durch abweichende Bindemittel und Additive. Entsprechende Korrekturen sind somit von Fall zu Fall erforderlich. Grundsätzlich können die Rezepte auch auf andere lösemittelhaltige Bindemittelsysteme (z. B. Acrylat, Langölkalkyd, Epoxy, Polyester, Polyurethan) übertragen werden.

Folgende Zugabemengen empfehlen wir als Orientierung für die unterschiedlichen Farbtonbereiche:

ca. 20-25 %	ca. 10-15 %	ca. 5-10 %
Gelb, Orange	Rot	Pink, Violett, Blau, Grün, Grau, Braun, Weiß, Schwarz

Haupteigenschaften

- Breite Pigmentauswahl
- Sehr hohe Pigmentkonzentration und gute rheologische Eigenschaften
- Gute Verträglichkeit in den meisten Lösemittel basierenden Industrielacksystemen
- Für automatische und manuelle Dosiermaschinen geeignet
- Keine Gefahrgut Kennzeichnung
- Keine besondere Lagerung notwendig bezüglich der Entflammbarkeit

WICHTIGE HINWEISE

- Vorprüfungen im Kundensystem sind zwingend, insbesondere im Hinblick auf die Verträglichkeit und maximale Zugabemenge
- Der Colour Index in dieser Broschüre bezieht sich auf das in der Präparation verwendete Pulverpigment
- Die angegebenen technischen Daten können leicht variieren, da die Präparationen in Bezug auf Farbstärke, Farbton und Chroma standardisiert werden

Spezifikationen
